

Summary

With its acclaimed author team, cutting-edge content, emphasis on medical relevance, and coverage based on key experiments, Molecular Cell Biology has justly earned an impeccable reputation as an exciting and authoritative text. Avoiding an encyclopedic approach, the book grounds its coverage in the experiments that define our understanding of cell biology, engaging students with the exciting breakthroughs that define the field's history and point to its future. The authors, all world-class researchers and teachers, incorporate medically relevant examples where appropriate to help illustrate the connections between cell biology and health and human disease.

CONTENTS

PART I: CHEMICAL AND MOLECULAR FOUNDATIONS

1. Molecules, Cells, and Model Organisms
2. Chemical Foundations
3. Protein Structure and Function
4. Culturing and Visualizing Cells

PART II: BIOMEMBRANES, GENES, AND GENE REGULATION

5. Fundamental Molecular Genetic Mechanisms
6. Molecular Genetic Techniques
7. Biomembrane Structure
8. Genes, Genomics, and Chromosomes
9. Transcriptional Control of Gene Expression
10. Post-transcriptional Gene Control

PART III: CELLULAR ORGANIZATION AND FUNCTION

11. Transmembrane Transport of Ions and Small Molecules
12. Cellular Energetics
13. Moving Proteins into Membranes and Organelles
14. Vesicular Traffic, Secretion, and Endocytosis
15. Signal Transduction and G Protein–Coupled Receptors
16. Signaling Pathways That Control Gene Expression
17. Cell Organization and Movement I: Microfilaments
18. Cell Organization and Movement II: Microtubules and Intermediate Filaments
19. The Eukaryotic Cell Cycle

PART IV: CELL GROWTH AND DIFFERENTIATION

20. Integrating Cells Into Tissues
21. Stem Cells, Cell Asymmetry, and Cell Death
22. Cells of the Nervous System
23. Immunology
24. Cancer
